Mr. J. S. Lederberg AS V-12 USNR
60 Haven Ave, New York 32

My dear Mr. Lederberg,

I am sorry your letter of July 3rd was returned instead of forwarded. Evidently some very new recruit was pinch hitting in the college P. O. this summer.

There seems to be here in my office no more reprints of the paper on *Nemophila* which you request. It is quite possible, however, that Dr. B. S. Dodge at the U. G. Botanical Gardens has some copies and would send you one. I have done no further direct work on the phenomenon of which you speak, since 1936. It is interesting that you have run into the anomaly again, and I should appreciate receiving a copy of your report when it appears. I presume you are acquainted with Dr. Dodge's work on this (p. 85) in his paper in the Bull. of the Torrey Bot. Club for Feb. 1942?

Very sincerely yours,

Arvid Pease
